UID EX – Movie Ticket Booking App

AIM:

The aim is to create storyboards representing the user flow for a mobile Movie Ticket Booking application using wireframes.

TOOL USED:

Balsamiq Wireframes (https://balsamiq.com)

PROCEDURE:

1. Opened Balsamiq Wireframes and created a new project.
2. Added multiple mobile screens to represent the complete movie ticket booking process.
3. Designed each screen using basic UI components like buttons, text fields, images, and icons.
4. Ensured that each screen represents a step in the user journey.
5. Maintained a simple and clean layout focusing on usability and flow.

USER FLOW:

1. Homepage – User browses movies and selects a movie.
2. Movie Details Screen – User views details and show timings.
3. Theatre Selection Screen – User selects theatre and timing.
4. Seat Selection Screen – User selects seats.
5. Checkout Screen – User reviews booking details.
6. Payment Confirmation Screen – User completes payment and gets confirmation.
